Lunch Talk:

“Science Beyond the Lab: Engaging the Public, Promoting Science-Based Policy, and Improving Lives”

A discussion led by

**Pamela C. Ronald, PhD**

Professor, Department of Plant Pathology and the Genome Center, UC Davis; Co-author of “Tomorrow’s Table: Organic Farming, Genetics, and the Future of Food”

The Ronald laboratory studies the role that genes play in a plant’s response to its environment. Our main research model is rice, the staple food for more than 3 billion people. Projects include studies of the XA21-mediated innate immune response and Sub1A-mediated tolerance to environmental stress.

Monday, March 3, 2014
12:30-1:30pm
Genentech Hall N-114, Mission Bay
Lunch will be served.
All are welcome (session is tailored for students)
